To Whom It May Concern

RoHS Compliant parts made by Tusonix, Inc.

This letter is to inform you about the status of parts made by Tusonix, Inc. in compliance with the European Parliament Directive 2002/95/EC, Restriction of Hazardous Substances (RoHS) in electrical and electronic equipment. In 2003, Tusonix embarked upon a company funded project to bring all of our products into RoHS compliance. The first priority was to incorporate RoHS compliant soldering into the manufacturing of our broad product line. At the same time we began to evaluate each product with respect to other restricted substances defined in the directive.

To validate our process of using RoHS compliant solder alloys and other material, we manufactured production lots of parts in each product family made in a RoHS compliant design and a control lot the existing way. Both lots then went through rigorous testing. A summary of the testing and the results is provided per the attached test report, No. 2005-01.

We have already released some product families that can be ordered and we expect to have the project completed by end of July 2005.

The RoHS compliant parts have the same part number except there is a "LF" suffix added to the right of the existing part number. The existing non RoHS parts will continue to be available as long as there is demand for them. Please let us know if you have any questions.

We hope this will help you, our customer to become compliant with your product.

Sincerely,

Thomas J. Spuhler
Vice President Marketing
TUSONIX, Inc.
